PF/ATEX

PLUG FAN TYPE HIGH EFFICIENCY
CENTRIFUGAL FANS

These new products exceed the requirements of the ErP 2009/125/EC Ecodesign Directive and its regulating provisions (EU) 327/2011 for fans, and 1253/2014 for ventilation units, collaborating with the KYOTO Protocol objective of reducing carbon emissions.

BENEFITS

- Energy savings of 70%, thanks to their EC TECHNOLOGY and speed control
- Reduction in energy costs
- Reduction in environmental impact
- Low noise level
- Balanced ventilation at all times
- Centralised installation that is easy to maintain

Industrial EC TECHNOLOGY motors, with technology developed by SODECA, are designed to meet IE5 efficiency standards. These units provide great energy savings and are equipped with the electronic systems required for operation as well as a variable speed drive (VSD).

ENERGY SAVINGS
PROVIDED BY SYSTEMS
EQUIPPED WITH
EC TECHNOLOGY

A great technological solution
that meets the new market requirements

Important **reduction** in energy costs.

Perfect **speed control**, by means of external sensors.

Helps fan **operation**.

MEDIUM AND HIGH PRESSURE CENTRIFUGAL FANS

Since it was first established, SODECA has specialised in the design and manufacture of fans and accessories for industrial applications. Specifically, designs in this sector must be capable of adapting to the specifications of each project as well as being sufficiently flexible in terms of production in order to meet the individual needs of each client. The case-free Plug Fan type centrifugal fans made by SODECA are known for their compact design.

VERSATILITY

These fans have been designed and manufactured to adapt to the spaces found in the different applications. They are designed for ventilation and air conditioning systems, air handling units (AHUs), cooling systems, all type of machinery and clean rooms. Designed for medium and high pressure applications.

HIGH QUALITY

The Plug Fan type centrifugal fans made by SODECA are built using galvanised sheet steel and the impeller has reaction (backward curved) blades. These units have a pressure measurement connection point with an automatic flow control option and are easy to maintain. The finish of these fans is compliant with C3H requirements and optionally, with C4H or C5MH requirements.

SOLUTIONS COMPLIANT WITH THE ATEX DIRECTIVE: MAXIMUM SAFETY AND QUALITY

An ATEX zone is an area containing a mixture of air and flammable gas, flammable liquid vapour, combustible liquid mist or combustible dust, which if ignited, will cause an explosion. Many situations exist that may require specific types of fans that are suitable to operate in these explosive atmospheres. The construction of SODECA's equipment for ATEX is based on a non-sparking fan, powered by an electric motor that is compliant with the requirements of the most stringent standards. SODECA guarantees the quality of its products in order to maximise the safety of personnel and facilities.

In order to adapt its products to specific industrial applications, SODECA has standard production lines as well as a production line for building specials to the client's requirements. Its standard production line meets the most stringent standards of the European ATEX directive 2014/34/EU. The units are designed in accordance with standard EN 14986 to prevent sparks from being generated as a result of friction or impact between the moving and static parts of the fan. They are made using materials which can be combined to prevent the generation of sparks. They also include a copper inlet ring.

To prevent the risk of explosion in facilities with explosive atmospheres, it is essential to have certified equipment manufactured for this purpose. To comply with the standard, all painted parts of the fan are connected with earth cables to prevent sparks being generated by static electricity.

Any device installed in an explosive atmosphere must be designed and manufactured to prevent ignition and, consequently, prevent an explosion. This can lead to a considerable increase in the cost of equipment, maintenance and safety procedures in facilities with explosive atmospheres. For this reason, in most industries, there is a tendency to declassify the number of explosion risk zones where ever possible.

To fully or partially declassify an area, the area must be vented with air, free of explosive gases or dusts, in order to reduce the concentration of those gases or dusts to below the lower explosive limits. This venting process reduces the level of risk in the area or minimises the size of the classified zone, thus reducing the anti-explosive requirements of the equipment that is to be installed.

PF/EC

Plug Fan type high efficiency centrifugal fans, equipped with EC Technology IE5 motor with integrated electronics

High-efficiency centrifugal Plug fans, for air treatment applications. Equipped with EC Technology IE5 motor with integrated electronics, specially designed to obtain high energy efficiency.

Fan:

- Galvanised sheet steel structure.
- Backward curved impeller made of sheet steel.
- Complete with a pressure measurement connection point for optional automatic flow and pressure control.
- Vertical execution not available for sizes 1871.

Motor:

- High efficiency EC Technology motors with integrated electronics, regulated by 0-10 V or 4-20 mA.
- IE5 efficiency motors, class F and IP55 protection.
- Single-phase 230 V 50/60 Hz and three-phase 400 V 50/60 Hz.
- Working temperature: -20 °C +60 °C.
- Modbus RTU and built-in alarm relay (three-phase models).

EC CONTROL: Supplied as an optional accessory. Control panel for ventilation systems with EC Technology motors with the electronics integrated in the motor itself. With the following characteristics:

- CPC: Constant pressure control.
- CFC: Constant flow control.
- DAY/NIGHT: Double pressure setpoint adjustment according to time of day.
- External sensor: compatible with temperature, humidity, air quality or CO sensor.
- Equipment preconfigured in constant pressure mode with 100 Pa set point.

Finish:

- Anti-corrosive in galvanized steel sheet.

EC TECHNOLOGY MOTOR with integrated electronics

EC CONTROL Supplied as an optional accessory

Plug Fan type high efficiency centrifugal fans for air treatment applications, with AC motor

Fan:

- Galvanised sheet steel structure.
- Backward curved impeller made of sheet steel.
- Complete with a pressure measurement connection point for optional automatic flow and pressure control.
- Vertical execution not available for sizes 1871 and 2180.
- A frequency variator is necessary for work points that require rpm other than the motor's nominal ones.

Finish:

- Anti-corrosive in galvanized steel sheet.

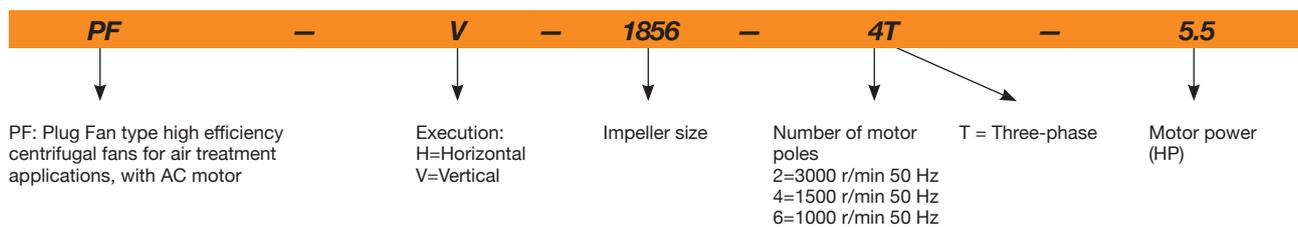

On request:

- With two speed motors.
- Stainless steel construction.

Motor:

- IE3 efficiency AC motors.
- Class F motors with ball bearings and IP55 protection.
- Three-phase 230/400 V (up to 4 kW) and 400/690 V (powers greater than 4 kW).
- Maximum temperature of air to be carried: -25 °C +60 °C.
